I am a web developer with over four years of experience in web application development using front-end tools such as Vue and React. Additionally, I have experience managing small teams of mid-level and junior developers. I have a good understanding of Git, Git flow, and agile methodologies. Furthermore, I am familiar with back-end technologies such as NestJS, MySQL, RabbitMQ, and more.

WORK EXPERIENCE

simorgh

(April 01, 2022 - Present)

Full-stack developer

As a front-end developer, I have created a web-based trading platform with features like market depth, buying and selling cryptocurrencies, currency conversion, transaction history, wallets, and more. I also built sections such as the customer panel and management panel. Furthermore, I developed backend services for this platform using NodeJS/NestJS. These services used web sockets to provide real-time information such as market depth, order history, and wallet balances. They were connected to other services using RabbitMQ. Overall, during my time at this company, I developed around 10 different front-end and back-end projects for client usage, company introductions, and digital marketing campaigns.

Tamuk

(April 01, 2021 - March 01, 2022)

Front-end developer

As a front-end developer, my primary role involved the development of the main website and the management panel. The main website serves as a platform that connects raw material suppliers with factories. For this project, I utilized the React library to develop the main website, while the management panel developed separately using the Vue framework.

freelance

(March 01, 2019 - April 01, 2021)

fullstack web developer

After dedicating two years to learning and working on various projects, I made the decision to pursue a career as a freelancer. During this time, I successfully completed multiple e-commerce and corporate projects, which not only enhanced my technical expertise but also allowed me to develop valuable soft skills.

CERTIFICATIONS

SQL server

State Technical & Vocational Training Organization

Web Applications for Everybody Specialization

coursera

Step into the world of web and database application development with this interactive and comprehensive program. With a focus on PHP, SQL, JavaScript, and jQuery.
