saleh shokouhi

Web developer

👤 About Me

I am a web developer with over four years of experience in web application development using front-end tools such as Vue and React. Additionally, I have experience managing small teams of mid-level and junior developers. I have a good understanding of Git, Git flow, and agile methodologies. Furthermore, I am familiar with back-end technologies such as NestJS, MySQL, RabbitMQ, and more.

🎓 Educations

- **Bachelor's degree Electrical engineering**
  Applied science

💼 Employment History

- **Full-stack developer**

  simorgh

  April 2022

  Description:
  As a front-end developer, I have worked on building a web-based trading platform that includes market depth, buying and selling cryptocurrencies, currency conversion, transaction history, wallets, and other features. This project also included other sections such as customer panel and management panel.
  Furthermore, I developed several backend services for this platform using NodeJS/NestJS. These services use web sockets to provide necessary information such as market depth, order history, wallet balances, and more. These services are connected to other services using RabbitMQ.
  In total, over the course of a year, I developed around 10 separate front-end and back-end projects for client use, company introductions, and digital marketing campaigns at this company.
  I also collaborated with two other individuals in managing the front-end department.

- **Front-end developer**

  Tamuk

  April 2021 - March 2022

  Description:
  As a front-end developer, I was responsible for developing the main website and the management panel (biz.tamuk.ir).
  This website serves as a platform for connecting raw material suppliers and factories.
  The project was developed using the React library, and the management panel was developed as a separate project using the Vue framework.
